

UPATCH

DID YOU KNOW

We now have two types of incredible quality coldmix asphalt for emergency road repairs.

- **Everyday Original Coldmix Blend**
- **Premium Coldmix Blend.**

*Affordable and sealed in foil for a 12 month shelf life.
Extensively used by councils and shires across 5 states.*

UPatch now offers a Premium grade product with enhanced adhesion agents added for extra strength and hold. This product is the next level in road patching, about as close to a hotmix hold as a coldmix product can get. Just ask us, and we'll gladly send you some bags to trial against any existing road patching products used. We're sure you'll find we can improve your road repairs and save you money.

*Contact us now to receive a quote for
all of your bagged asphalt needs*

**AUSTRALIAN MADE
USING LOCAL RAW MATERIALS**

*This is Tim from the
Latrobe City
making a road
repair with UPatch.*

Upatch has created an incredibly high quality, easy to use asphalt repair solution for professionals and DIYers alike. Working with asphalt may be a new experience for you, so let's cover some basic information regarding the cold mix and its uses.

Cold mix asphalt doesn't require heating for use. When you think of asphalt for patching and small jobs, you're thinking of a cold mix. Cold mix asphalt is primarily used for repairing potholes and cracks. In colder climates, it is used when it's too cold to use a hot mix. Cold mix is best for small-scale fixes and patches.

Upatch offers a cold mix that makes backfilling and patching quick and easy. Any repair work that requires patching of asphalt can be handled fast with cold mix asphalt.

Some of the most significant advantages of cold mix asphalt are:

- **Cost Effective** – Cold mix is far more affordable than hot mix asphalt. The cold mix comes in bags, meaning you only need to purchase the perfect amount for your patches and repairs without dealing with the larger amounts hot mix comes in.
- **Practical** – Cold mix can be used in colder weather. It is also perfect for the DIYers out there that want to fix the unsightly cracks and holes in their driveways.
- **Ease of use** – Cold mix asphalt is perfect for quick repairs for things like trench work, footpath repairs and car park maintenance.

QUALITY RAW MATERIALS

Our Upatch Coldmix product is a blend of rock, sand, dust and additives to bind it all together.

It's specialty formulation also makes it a non hazardous material.

All of our raw materials have been sourced locally in quarries around Gippsland, Victoria. Which means we are confident all the materials used in our products are high grade.
