

CHIPSEALER CT

Delivering safer, smarter and more efficient spray sealing operations

The Chipsealer CT has been engineered for Australian conditions, providing a versatile spray sealing solution capable of delivering Polymer Modified Bitumen (PMB), Crumb Rubber Bitumen (CRB), straight grade bitumen and emulsion applications.

Designed with operator safety, ergonomics and productivity in mind, the Chipsealer CT supports a wide range of road preservation and pavement maintenance activities while helping crews work more safely and efficiently.

Customer benefits include:

- Improved operator safety through forward application and in-cab controls.
- Reduced manual handling and exposure to live traffic environments.
- Capability to apply PMB, CRB and bitumen emulsions from a single platform.
- Compliance with Australian spray sealing requirements.
- Ergonomic design developed with frontline operators.
- Customisable configuration to suit customer and network needs.
- Supported by local calibration, commissioning and technical expertise.

CHIPSEALER CT

Delivering safer, smarter and more efficient spray sealing operations

Supported by local delivery teams and technical expertise, the Chipsealer CT combines advanced spray sealing technology with practical field-focused design.

The machine has been developed to help customers improve safety outcomes, increase operational efficiency and deliver high-quality surface treatments across metropolitan, regional and remote road networks.

Included features:

- Electrical night heating system
- Crumb rubber capable pump
- Rear and hopper cameras
- Electric tarpaulin protection
- Integrated jobsite management capability
- LED work lighting package
- Hand lance assistance
- 5mm - 16mm aggregate capability
- Operator monitoring and control systems

A customer-focused circular spray sealing solution

Safer spray sealing through forward application and in-cab controls

Reduces operator exposure and manual handling requirements

Compatible with PMB, CRB and bitumen emulsion applications

Designed specifically for Australian operating conditions

Supports productivity through automated operating functions

Delivered with local technical support and commissioning
